

What % of males have a BMI less than 19?

$$z \cdot \text{std dev} + \bar{x} = x_i$$

$$z = \frac{x_i - \bar{x}}{\sigma}$$

$$z = \frac{19 - 27.9}{7.8}$$

$$z = -1.14$$

$\text{normalcdf}(-10, -1.14, 0, 1)$

What BMI score is at the 75th percentile?

Table →

Table entry for z is the area under the standard Normal curve to the left of z .

Table A Standard Normal probabilities (continued)

$$z = 0.67$$

$$z = \frac{x_i - \bar{x}}{s}$$

$$0.67 = \frac{x_i - 27.9}{7.8}$$

$$\underline{x_i = 33.1}$$

From the table, a z-score of .67 corresponds to an area of 0.75 which is the 75th percentile. A BMI score of 33.1 is at the 75th percentile.

$\uparrow -z_\alpha$ z_α

0.05 $\rightarrow z_1 = -1.65$

$z_2 = 1.65$
